

GeneXusTM USA

SOFTWARE FACTORY

On time
According to specifications
On budget

| Main Benefits

Our GeneXus USA Software Factory offers the following advantages:

- The best **price/functionality ratio** in the market, which is proof of our efficient processes.
- Optimum **resource** availability and application with economies of scale, through multiple projects.
- **Technological specialization** and use of all disciplines required in IT projects.
- Maximum **productivity** based on agile and proven methodologies, with the support of formal processes.

Functional specialization in various domain areas (Industry, Banking, Health, Retail, Utilities). Development of quality software, while complying with deadlines, scope and budget.

- Are you looking for modern IT solutions to make you stand out in the market with no technological factors preventing the development of your business?
- Would you like the development and maintenance component in your IT budget to be equally foreseeable and optimum in terms of added value?
- Do you need timely delivery for your requirements relative to development and maintenance applications, without exceeded budgets and missed deadlines?
- Does the quality of development services at your company imply technological risk for your business operations?

GeneXus USA Software Factory is ideal for ensuring compliance with specifications on time and within budget.

| Testimonials

"We have created a very successful extended development team with the GXSF, and I fully recommend it to anybody who wants to develop elegant, modern, fully-functional applications."

PayPlus Software, Inc.

"I think the GeneXus USA Software Factory is a great way for any GeneXus customer to jumpstart to a new technology and reusing as much as you can of your current environment without spending a mint in consulting services. I definitely recommend it!"

Madden Co, Inc.

| Main features

GeneXus USA Software Factory proposes a partnering scheme for the GeneXus Community and corporate customers, where the services offered are sized to large scale consumers in the global market. The services provided by GeneXus USA Software Factory are based on a model of processes that perfectly combines development in the field and development done remotely.

Managing Demand

All teams need a good bench to rely on. Without having to invest in training to keep up with the latest technologies, or staff to cover spikes in demand, let the software factory be your technical "go to" team to support your software development needs.

Having a software construction factory of your own represents a vital competitive advantage to allow highest-quality response in the provision of applications and components built in any language and/or platform.

Specialization

Modern applications are built with high-level components, on the basis of an increasingly complex and diverse technology stacks (Data Warehouse, Workflow, Web 2.0, Mobile Intergration, XML, Webservices, etc.). All this requires different levels of specialization that are not always part of the technical resources of an organization.

With GeneXus USA Software Factory, customers have the option to supplement their specialization with full solutions that offer the highest degree of technology.

Cost - Benefit

Our unique technologies, along with our highly qualified technicians sourced both regionally and internationally, have enabled us to become a highly competitive and cost effective resource for any development.

We can document that we deliver projects with very high productivity, as measured with Function Points.
